Age: 65 years Sex: Female DOB: 7/27/1960
Associated Diagnoses: None
Author: Hewett DO, Marie

Attending Provider: Hewett, Marie
Referring Physician: RAHMAN M.D., SYED FAIZ
Primary Care Physician: None

History of Present Illness:
Diane Pastirik is a 65-year-old female with PMH of CHF, COPD, CAD, HTN, HLD, hyperthyroidism, who initially presented to the emergency room at Sunrise Hospital on 02/25/2026 with several weeks of worsening shortness of breath and cough, which had been progressively increasing. She was found to have acute on chronic respiratory failure with pneumonia, an exacerbation of chronic obstructive pulmonary disease, acute on chronic heart failure with preserved ejection fraction, and a non-ST-segment elevation myocardial infarction. During her hospitalization, she was treated with intravenous antibiotics (ceftriaxone and doxycycline), steroids, nebulized bronchodilators, and was started on antiplatelet therapy with clopidogrel and aspirin, as well as atorvastatin for dyslipidemia. She required high-flow oxygen and was placed on a tapering regimen as her respiratory status improved. Cardiology ws consulted and she was managed conservatively for her NSTEMI. Once stable, she was transferred to AMGltac on 3/10/26 for ongoing care and management. She has since completed intravenous antibiotic treatment and remained on 3 liters per minute of supplemental oxygen via nasal cannula, with home oxygen arranged. Her hospitalization was further complicated by anemia, borderline thrombocytopenia, elevated blood urea nitrogen, and hypoalbuminemia, reflecting significant systemic illness and nutritional compromise.
Prior to her recent illness, the patient was living independently in a group home, was cognitively intact, and managed all activities of daily living and mobility without assistance. She maintained a moderately active lifestyle and was independent in ambulation and self-care. Following her acute illness and hospitalization, she experienced a significant decline in functional status, now requiring minimal assistance for bed mobility, transfers, and ambulation with a front-wheeled walker. She also needs minimal assistance for basic activities of daily living such as toileting and lower extremity dressing, setup for feeding, and standby assistance for upper extremity dressing. She continues to experience bilateral foot pain, which requires regular assessment and management to facilitate participation in therapy. Her current rehabilitation goals are to increase functional mobility and activities of daily living, improve strength, endurance, and balance, and return to her prior level of function so she can safely return to her group home. Patient is now admitted to Encompass acute inpatient rehab for comprehensive therapy program prior to safe discharge home.
Today, patient seen reclined in bed. She reports sleeping well overnight and states initial therapy evaluation went well. She denies any current pain. No questions or concerns at this time. No reported fevers, chills, chest pain, or shortness of breath.

Family History: noncontributory

Social History:
Patient currently resides in a group home. Prior to current illness, patient was independent in mobility, self-care, and cognition, and maintained a moderately active lifestyle. Patient now requires minimal assistance for bed mobility, transfers, ambulation with a front-wheeled walker, basic ADLs such as toileting, feeding setup, and lower extremity dressing, with standby assistance for upper extremity dressing. Patient does not use alcohol, tobacco, or illicit drugs.

Functional Assessment (current vs. prior level of function that preceded current medical/surgical illness):
The patient previously functioned independently in mobility, self-care, and cognition, maintaining a moderately active lifestyle, but has now experienced a significant decline requiring minimal assistance for most activities. Currently, the patient requires minimal assistance for bed mobility, transfers, ambulation, basic ADLs, and dressing, reflecting a new burden of care and reduced independence.

Prior Level of Function: Ambulation: Independent ADL's: Independent Prior Cognitive Status: Independent Prior Physical Activity Level Moderately Active: Yes

Comprehensive Rehabilitation Plan
Rehab
- Initiate PT/OT within 24 hrs as delineated below.
- Precautions: Fall
- DVT ppx: lovenox
- GI ppx: on famotidine
- Diet -- 03/30/26 19:56:00 PDT, Texture: Level 7 - Regular, Liquid Consistency: Level 0 - Thin, Restrictions: Consistent Carbohydrate
- Pain: APAP 650 mg q4h PRN.
- Bowel regimen: colace bid. miralax prn.

Additional medical issues:

History and Physical

- Baseline CBC and BMP
- Smoking cessation: on nicotine patch

Consultants:
- IM for management of medical comorbidities

Treatment Plan Anticipated
Required Disciplines: [PT, OT]
PT: ROM and stretching exercises. Bed Mobility, Transfers, Static/dynamic Balance, Ambulation with least restrictive adaptive device, Home management, Family Training. HEP.
OT: BUE strengthening and stretching. ADL/iADL re-training with adaptive equipment PRN. Safety, Balance with self care, Gross/Fine Motor Movements, Modalities PRN, Splints PRN. Home management. HEP.

Intensity of Services: [3 hours of therapy a day/5 days a week]
Estimated Length of Stay: [14 days]
Goals: Modified independent for self care, transfers and for ambulation.

Risk of complications:
Pain: The patient experiences frequent bilateral foot pain requiring regular pain assessments and physician-directed pain management, with interventions timed around therapy sessions to maximize participation and mobility gains.

Bowel/Bladder: The patient is continent, but rehab nursing is required to assist with timely toileting as mobility improves and to support safe transfers to maintain continence and reduce fall risk.

Hemodynamic: The patient has congestive heart failure, hypertension, and coronary artery disease, requiring management with diuretics, beta-blockers, and antiplatelet agents; frequent blood pressure and heart rate monitoring, fluid status assessment, and physician oversight are necessary to prevent decompensation during increased activity in rehabilitation.

Respiratory: The patient has acute on chronic respiratory failure related to COPD and pneumonia, remains dependent on supplemental oxygen, and uses multiple inhaled bronchodilator and steroid therapies; frequent physician monitoring of oxygen requirements, pulmonary status, and response to treatment is needed as activity levels increase in rehabilitation.

Skin Integrity: The patient has stage 1 pressure ulcers on the sacrum and right hip, with erythema but no drainage; silicone barrier cream is applied daily and as needed, and wound prevention strategies are discussed due to high risk of rapid deterioration from multiple comorbidities.

Mental Status: The patient is cognitively intact and previously functioned independently, supporting active engagement in high-intensity rehabilitation; ongoing monitoring for depression and agitation is indicated, with citalopram and risperidone prescribed as needed.

Nutrition: The patient has hypoalbuminemia and anemia, reflecting nutritional compromise and physiologic vulnerability; a heart-healthy, sodium-restricted diet is prescribed, with daily Ensure supplement and juice, and dietician involvement to reinforce dietary adherence during rehabilitation.

Attestation:

Admit Date: 3/30/2026
Discharge Date:
Attending Phys: Hewett DO,Marie

History and Physical

Considering all of the information above, it is my best judgment that this patient requires intensive rehabilitation therapy as described above in an inpatient hospital environment due to the complexity of nursing, medical management, and rehabilitation needs, and can reasonably be expected to participate in and benefit from an inpatient stay with an interdisciplinary team approach to the delivery of rehabilitation care under the direction and supervision of a rehabilitation physician.

Discharge Instructions

Anticipated Discharge Plan
Anticipated Discharge Plan
Anticipated Discharge Plan: Home with Home Health (04/06/26 10:05:00)
Expected Discharge Live With: Family or relatives (03/31/26 15:04:00)
Anticipated Discharge Date: 04/08/26 00:00:00 (04/03/26 13:44:00)
Discharge Destination Status
Community Discharge Status: Home with home health (06H) (04/06/26 10:05:00)
Discharge Destination Verified: Yes (04/06/26 10:05:00)

Physical Therapy Discharge Recommendations
Recommendations Comment PT

04/06/26 08:00:00
HH vs outpatient PT

Recommended D/C Treatment Plan PT: Home exercise program, Neuromuscular reeducation, Therapeutic exercises

Physical Therapist Discharge Instructions
Safety and Weight Bearing: You can bear full weight on your legs
Getting In and Out of Bed: You can get in and out of bed independently
On Level Surfaces Indoors: You can walk independently
On Surfaces Outdoors: You must have someone with you
On Curbs: You can walk independently
On Stairs: You must have someone with you

Occupational Therapy Discharge Recommendations
Recommendations Comment OT

04/06/26 09:30:00
Recommendations to focus on while utilizing energy conservation techniques:
-IADL's
-Safety protocols with functional mobility, functional transfers, and transitional moves.
-Balance, transitional moves and weight shifting.
-Work on core strengthen and flexibility with proper body mechanics during basic self-care.
-Work on functional mobility through incorporating transitional movements, transfers, weight-shifting, and sit to stands.

Recommended D/C Treatment Plan OT: Balance training, Energy conservation training, Home program, Therapeutic PO feeding

Appetite: Good (04/05/26 20:23:00)

Encompass Health Rehabilitation Hospital of Las Vegas
Patient: PASTIRIK, DIANE
MRN: 875004758
FIN#: 501434988
DOB/Age/Gender: 7/27/1960 65 years Female

Admit Date: 3/30/2026
Discharge Date:
Attending Phys: Hewett DO,Marie

Transition of Care Communication

H0400 Bowel Management: Continent (04/05/26 20:23:00)
H0350 Bladder Management: Continent (04/05/26 23:10:00)

Risk Factors
High fall risk

Discharge Plan Summary
Patient to discharge home on 4/8/26. Transportation by EH @1400. HHC provided by Meadows HH. DME order with Caremax. Community resources provided.

Home Health Referral

DOCUMENT NAME: HH Referral Progress Note-Physician
SERVICE DATE/TIME: 4/6/2026 13:14 PDT
RESULT STATUS: Auth (Verified)
PERFORM INFORMATION: Hewett DO,Marie (4/6/2026 23:15 PDT)
SIGN INFORMATION: Hewett DO,Marie (4/6/2026 23:15 PDT)

Home Health Referral

Patient: PASTIRIK, DIANE MRN: 875004758 FIN: 501434988
Age: 65 years Sex: Female DOB: 7/27/1960
Associated Diagnoses: None
Author: Hewett DO, Marie

HOME HEALTH CERTIFICATION and FACE to FACE ENCOUNTER ADDENDUM

A FACE TO FACE ENCOUNTER indicating the reason(s) this patient requires home health services was performed on DATE: _ 04/06/2026
Diagnoses and Clinical condition(s) contributing to the need for Home Health Care (specify):
COPD exacerbation
Acute on chronic resp failure with pneumonia
CHF exacerbation
NSTEMI
Impaired gait, mobility, endurance
Requires assistance with ADLs
Obesity class I, BMI 33
HFpEF
COPD
CAD
HTN
HLD
Hyperthyroidism

The patient is confined to the home for the following reason(s):
[] Unable to ambulate

Encompass Health Rehabilitation Hospital of Las Vegas
Patient: PASTIRIK, DIANE
MRN: 875004758 Admit Date: 3/30/2026
FIN#: 501434988 Discharge Date:
DOB/Age/Gender: 7/27/1960 65 years Female Attending Phys: Hewett DO,Marie

Home Health Referral

[] Unable to ambulate > ___ feet without rest periods
[X] Requires assistive device: wheelchair, walker and/or assistance of another person to leave home
[] Requires the use of special transportation
[] Confusion/Cognitive limitations make it unsafe for patient to leave home
[] Pain interferes with outside mobility
[] SOB with exertion/activity, requires rest periods
[] Medically restricted to home (reason if not specified above): []

Prescriptive needs:
[X] Medication Management
[] Pain assessment and management
[] Disease Process Education
[X] Gait Training
[X] ADL training
[X] Fall Risk/Balance Assessment and training
[X] Strength/ Range of motion training
[] Speech training
[] Cognitive retraining
[] Dysphagia training
[] Safety Assessment and training
[] Wound Care:[]
[] other: []

HOME HEALTH REFERRAL AND ORDERS:

Discipline-specific frequency and duration of service recommendations may be further specified by the physician responsible for the home care plan of care.

[X] Skilled Nursing for: [X] med mgmt. [X] teaching and training [] Wound care [] Other:
[X] Occupational Therapy for: [X] ADLs/IADLs [X] therapeutic ex. / activity [] Other:
[X] Physical Therapy for: [X] gait/balance [X] therapeutic ex. / activity [] Other:
[] Speech Therapy for: [] Dysphagia [] Cog [] Speech / Language [] Other:
[X] Home Health Aide for:
[X] bathing / personal care as indicated by the comprehensive assessment with input from the interdisciplinary team and community physician.
[] Social Worker 1-2 visits for:
[] assessment, education and/or action on community resources, and counseling as indicated

This patient is currently under my care, and I have initiated the establishment of a plan of care for home health services following the face-to-face encounter on the date noted above. I certify that this patient is confined to his/her home and needs intermittent skilled services (nursing care, physical therapy and/or speech therapy or continues to need occupational therapy) as indicated in the above summary of impaired body structures that supports the homebound status and need for skilled care. This patient will be followed by their PCP who will be responsible for further review of the plan of care and recertification as applicable.
