DISCH DATE: 03/11/26 TIME: 0754 DISPO:

flexion-extension. Redislocated the radial head and retrieved the trial. We tamped in place our final implant. I closed the extensor wad with a running locking stitch attached to the G2 Mitek anchor which was buried in his condyle. I ran and locked this to repair the deep fascia as well as the superficial fascia overlying the radial head. 2-0 Vicryl was used. Subcutaneous tissue followed by 2-0 Prolene. Sterile dressing was placed. He was placed in a sling. He was extubated and transferred to the PACU in stable condition.

Operative findings:

displaced comminuted radial head fx
ext disruption lateral condyle elbow

03/10/2026 David A SILVERBERG, M.D.

Current Medications
None

Past Medical History
- Medical History Verified.

Surgical History
- No Surgical History documented.

Family History
- No Family History documented.

Social History
Tobacco Use:
- Tobacco Control (Standard)
  Tobacco use: *Current smoker*
  How often do you smoke cigarettes? *Every day*
  How many cigarettes a day do you smoke? *5 or less*

Screening

Allergies
- N.K.D.A.

Hospitalization/Major Diagnostic Procedure
- No Hospitalization History.

Reason for Appointment
1. R elbow CT scan @ SDMI

History of Present Illness
Constitutional:

38-year-old male follows up after his CT scan for an acute proximal radius fracture. This involved his radial head and radial neck.

Vital Signs

Examination
Orthopedic / General:

mild moderate swelling right elbow
Skin intact
no focal motor deficit right hand including radial ulnar median nerve distributions
limited pronation supination secondary to pain at the right elbow.

Physical Examination

healthy appearing
In his sling with ice bags
Unaccompanied for office visit
No shortness breath or cough
No smell cigarette smoke or weed.

Assessments
1. Displaced fracture of neck of right radius, initial encounter for closed fracture - S52.131A (Primary)
2. Displaced fracture of head of right radius, initial encounter for closed fracture - S52.121A

Treatment
1. **Displaced fracture of head of right radius, initial encounter for closed fracture**

   Notes: 38-year-old male with a intra-articular displaced radial head fracture and neck fracture. This is evident from his CT scan which I reviewed the images and discussed with the patient at the bedside.

  Interpretation *Negative*

Screening

Allergies
- N.K.D.A.

Hospitalization/Major Diagnostic Procedure
- No Hospitalization History.

Reason for Appointment
1. R elbow fx-03/01/26

History of Present Illness
Constitutional:

38-year-old male visited Sunrise Emergency room after a fall from an electric scooter on 03/01/2026. x-rays showed a radial neck and head fracture.

Vital Signs
Wt: **172** lbs, BMI: **28.62** Index, Ht: 5'5".

Examination
Orthopedic / General:

diffuse swelling right elbow
no appreciable ecchymosis right elbow
No focal motor deficit right hand including radial ulnar median nerve distributions
no gross deformity right elbow such as dislocation.

Physical Examination

accompanied by his father who is Spanish-speaking only
Patient speaks both English and Spanish fluently
in a long-arm splint which was removed
Sling replaced without the splint
healthy-appearing individual of normal body habitus.

Assessments
1. Displaced fracture of neck of right radius, initial encounter for closed fracture - S52.131A (Primary)
2. Displaced fracture of head of right radius, initial encounter for closed fracture - S52.121A

Treatment
1. **Displaced fracture of head of right radius, initial encounter for closed fracture**

   Notes: 38-year-old male status post a high-energy injury to his right elbow with a resultant radial neck and radial head fracture. I
