Tobacco Product: None
Pneumonia vaccination not administered or previously received

Advance Care
Healthcare Proxy: No
Living Will: No
Full Cardiopulmonary Resuscitation

Chief Complaints:
1. L KNEE

HPI: This is an 80 year old female who:
1. is being seen for a chief complaint of L KNEE. PT COMES IN TODAY WITH LEFT KNEE PAIN. STATES IT HAS BEEN ONGOING FOR A WHILE. SHE HAD MRI DONE AT DES RAD, AND X RAYS DONE IN THE OFFICE.

Exam:
Examination today reveals crepitus and pain throughout range of motion left knee. Mild valgus deformity. Calf is soft and nontender. Stable ligamentous examination. Well-healed arthroscopic portals

Impression/Plan:
1. **Knee Arthritis, Left**
   Unilateral primary osteoarthritis, left knee (M17.12)
   located on the left knee.

   Plan: Additional Notes.
   Patient Specific Notes: The patient has osteoarthritis left knee. She has been treated conservatively as well as with an arthroscopic debridement. She says she is ready for a total knee replacement. She did have an MRI scan of the left knee which shows lateral meniscus pathology as well as lateral compartment arthritis. She will need preoperative medical clearance. Follow-up for final surgical decision making visit

   Plan: Order Surgery: Knee Arthroplasty.
   SURGERY INFORMATION:

   Provider: Gary Morris
   Priority: normal

   Estimated Length of Procedure: 90 minutes

   Diagnosis: Knee Arthritis, Left - M17.12
   Surgical Site: left knee

   Position: Supine

   Plan: Counseling - Knee DJD.
   Musculoskeletal care: I advised the patient that most patients with degenerative joint disease of the knee can achieve some measure of pain relief from nonsurgical options like medications, lifestyle modification, exercise and physical therapy, and use of supportive devices or change in footwear. The importance of maintaining an ideal body weight or losing weight to reduce stress on the knee joint is a cornestone of nonoperative management. Expectations: I counseled the patient about the natural history of degenerative joint disease of the knee which typically has exacerbations and remissions. Many people report that changes in the weather also affect the degree of pain from arthritis. The knee joint does not heal on its own when there is arthritis. With time, the symptoms of arthritis may get worse.For some, conservative management may not be not satisfactory. These individuals should consider surgical options.
   Contact Office if your knee pain worsens, or if the knee becomes warm or accompanied by a fever.

Follow up. Other Instructions: AFTER SURGICAL DECISION MAKING
