When we call, we will also need to obtain the following information before seeing the patient. If you have these available, feel free to fax along with this form.

- Patient demographic information (including insurance info)
- Recent H&P or recent progress notes
- Medication List

THANK YOU FOR YOUR REFERRAL!!!

Home Health Protocol

Dr. Khavkin uses two different techniques to close the wound, depending on the patient's skin and overall body type.

1. The most common type of closure involves subcutaneous absorbable sutures with the skin closed with the glue (Dermabond) and a Steri-strip that is attached to the incision. On top of this, he puts a piece of Telfa dressing covered with a tape.

   The tape and Telfa can come off two days after the surgery. The glue and the Steri-Strips are waterproof and it's ok for the patient to take shower but not a bath or pools. The Steri-Strips usually fall off about two weeks after the surgery or Dr. Khavkin removes it when he sees the patient for a follow-up appointment 2 weeks after the surgery. Do not remove Stril Strip by yourself.

2. The second type of closure is when he uses staples, which then are covered with the antibiotic ointment and the Telfa dressing with the tape on top of it. With this kind of closure, the patient should not be taking shower without the incision being covered till the follow up appointment. The dressing needs to be replaced by Home Health Care team during each visit.

   At any point, if the HHC team member sees any concerns with the wound healing such as redness, swelling, opening of the wound or any kind of discharge, Dr.Khavkin and his staff need to be notified immediately.

   You should also notify Dr. Khavkin's staff if the patient has persistent pain, difficulty swallowing, signs of infection or any numbness, tingling or weakness in the extremities.

   You can start gentle physical therapy on the extremities without working on the area of the surgery (neck or back). Dr. Khavkin usually starts formal outpatient physical therapy around 4-6 weeks after the surgery.

Chief Complaint

Lumbar pain

Intake

Allergies
No known active allergies

Medications
Medrol (Pak) 4 mg tablets in a dose pack: 1 dose pk use as directed for 7 days, Prescribed Date: 04/01/2026

Problems
No known active problems

Vital Signs
No Vital Signs captured during this encounter

History of Present Illness

The patient presents for follow up for pre op consultation

Social History

Smoking History: no previous history of smoking; **never smoked**; not a current every day smoker;

Review of Systems

Spine Symptoms: back pain;

Physical Exam

Cranial Nerve Exam cranial nerves normal;

Consitutional: awake; alert; in no acute distress; well nourished; well developed;

Gait and Station: normal gait and stance; ambulation did not require cane; ambulation did not require walker; no abnormality of walk; no limping; not shuffling; normal posture; patient able to walk straight line;

Head and neck: appearance of neck normal; no tenderness of neck on palpation; cervical spine range of motion not decreased; normal cervical spine extension; normal cervical spine flexion;

Thoracic Lumbosacral Spine: tenderness on palpation of thoracolumbar spine; **tenderness on palpation of lumbosacral spine**; **range of motion decreased**;

Right Upper Extremity: motor strength normal; muscle bulk normal; normal muscle tone; no pronator drift; no tingling of right arm; no numbness of right arm; no pain in right shoulder joints;

Left Upper Extremity: motor strength normal; muscle bulk normal; normal muscle tone; no pronator drift; no tingling of left arm; no numbness of left arm; no pain in left shoulder joints;

Right Lower Extremity: motor strength reduced; muscle bulk normal; normal muscle tone; **tingling of right leg**; **numbness of right leg**;

Left Lower Extremity: motor strength normal; muscle bulk normal; normal muscle tone; no tingling of left leg; no numbness of left leg;

Skin: not anterior; no traumatic scar on neck; no lesions on neck; no lesions on back; no lesions on right arm; no lesions on left arm; no lesions on lower extremities;

Coordination normal coordination; no disturbance of coordination; no Romberg's sign;

Reflexes: normal deep tendon reflexes; no Hoffman's sign; deep tendon reflexes not hyperactive overall; no clonus of ankle/knee;

Sensation: sensation intact for light touch;

Mental Status: oriented to time, place, and person;

Imaging / Tests

1. **(Performed & Reviewed)**
   Impression
   MRI Lumbar - SimonMed - 02/26/2026

   Lumbar MRI shows significant abnormality at the L5-S1 level with a severe lumbar stenosis and a synovial cyst on the right side causing severe lateral recess stenosis for the nerve root compression

Assessment and Plan

1. **Lumbar pain M54.5 (M54.5):**
   04/08/2026, Lumbar pain, Chronic, Poorly Controlled

Plan

We will proceed with the surgery had been discussed previously consisting of the L5-S1 lumbar decompression and fusion
