She also states having a recent liver biopsy 2 weeks ago outpatient for her hep C. Patient reports having right upper quadrant abdominal pain that radiates to her back that started in the morning around 11 AM. She states that she had a similar episode 1 week ago that resolved on its own however today since 11 AM the pain has worsened and decided to come into the ED. She states that it occurred after eating some spicy noodles. When she got brought in by EMS, EMS gave her fentanyl and Zofran but did not find any relief. She otherwise denies any other complaints at this time. She states after getting medications in the ED, her pain has improved. Denies any alcohol use or drug use, reports being a former smoker.

Vitals in the ED show patient to be hypertensive that since resolved. Labs show WBC 16, platelets 456, glucose 145, gap 15, T. bili 3.9, alk phos 590, AST 203, ALT 83, lipase 2418. CTAP showed common bile duct dilatation with associated dilatation of the main pancreatic duct, concerning for possible pancreatic head mass, also showed peripancreatic edema consistent with pancreatitis. She was given Zofran, Dilaudid, Toradol in the ED. ED added patient to the GI list. Patient being admitted for pancreatitis.
